

Cobra Standard Cam Locks

The 1000 Series incorporates the original design of current tubular cam locks such as the ACE®, Gem® and others with our new and improved face and lock spindle.

All Cobra cam locks come with our improved anti-drill ball positioned in the center of the spindle. We also incorporate a shielded pin stack that will protect the combination pins, as well as a new style tubular key with a thicker design.

Cobra cam locks can be keyed alike or keyed different with thousands of key combinations available. The 1000 Series cam locks can be “keyed into” most of the existing tubular lock codes currently in the market.

Contact us to get additional information on this and other Cobra locks that can provide additional security at reasonable prices.

LSI Part Number	“A” Dimension	Description
	CobraMatic Standard	
TF1038t	11mm (3/8”)	Cobra-Tapped End
